

Is the industry still passive about passive fire protection?

We interviewed 226 architects, specifiers & commercial directors across the UK, France and Germany to assess knowledge levels.

ONLY **5** %

of respondents could accurately define

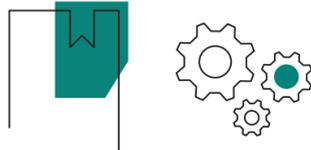

ALL FOUR BASIC FIRE PROTECTION TERMS:

ACTIVE

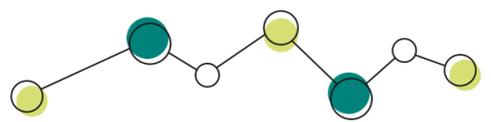

PASSIVE

ONLY **26** %

understand the difference between active & passive fire protection.

63 %

could not define the term

“**REACTION TO FIRE**”

(a fire performance measure for all European construction materials)

70 %

of UK architects couldn't correctly define...

FIRE RESISTANCE

OVER

1/3

of respondents admitted they don't have any understanding of how or why the **GRENFELL TRAGEDY** happened.

(under 25% gave an accurate description)

1/3

don't understand any of the issues faced by treating materials for fire protection, post manufacture.

73 %

couldn't name an organisation leading the way in passive fire safety or advice.
